

Building agents for real-world challenges

AI that doesn't just
provide answers—it
helps you take action.

About Dynatrace

Dynatrace helps developers and AI engineers building on Google Cloud understand how their applications behave from code to production. As you build, test, and release, it connects what you write to how services, data pipelines, and agents actually run, so you can trace issues, debug faster, and see the impact of changes at every stage.

By bringing runtime context into your development workflow, Dynatrace makes it easier to validate model behavior, troubleshoot agent interactions, and catch problems before and after deployment, so you can ship AI applications that behave the way you expect as they scale.

Dynatrace Resources

Instrument your agent with OpenTelemetry and ship traces, metrics, and logs to Dynatrace. Track token spend, tool calls, latency, and errors across Vertex AI, Gemini, and your coding agents.

Agent & Model Observability

- Agent Platform: [Dynatrace for Agent Platform](#) – Traces, prompt flows, token usage, and model latency for Agent Platform workloads.
- Gemini Enterprise: [Dynatrace for Gemini Enterprise](#) – One-click deploy from Google Cloud Marketplace.
- Coding Agents: [AI Coding Agent Monitoring](#) – Observability for Claude Code, Gemini CLI, Codex CLI, OpenCode, and GitHub Copilot SDK.
- Code Examples: [Instrumentation Examples \(GitHub\)](#) – OTEL exporter configs, sample dashboards, and ready-to-run instrumentation.

Telemetry Pipeline

- OTEL Pipeline: [Bindplane \(Google Edition\)](#) – Free OpenTelemetry-native pipeline for Google Cloud Observability and SecOps customers. Collect, process, and route telemetry at scale.
